1. INTRODUCTION:

This Expression of Interest (EoI) seeks response from Original Technology Manufacturer of Radiology Artificial Intelligence meeting the requirements of this EoI and are willing to be associated with HLL through a License & Technology Collaboration Agreement on long term basis to enable HLL to use the support of solution in Tele Radiology reporting service.

2. About HLL Lifecare Ltd

HLL Lifecare Limited (HLL) is a Public Sector Enterprise under the administrative control of the Ministry of Health & Family Welfare, Government of India. HLL's purpose of business is "to provide quality healthcare products and services at affordable rates". In its quest to become a comprehensive healthcare solutions provider, HLL had diversified into hospital products and healthcare services, while nurturing its core business of providing quality contraceptives.

The Diagnostic Services Division of HLL-"HINDLABS", provides quality and affordable Diagnostic Services (Path lab and Imaging) to partner institutions in a Public -Public Partnership model.

HLL is having teleradiology facility and through this we are providing teleradiology reporting services to various hospitals and Imaging clinics. Our Radiologist Panel consist of eminent and experienced Radiologists with high proficiency in speciality reporting including neuro-radiology, muskulo-skeletal imaging, paediatric imaging and abdominal imaging. Hindlabs Tele-radiology is being used by its own scanning centres spread all over India, other than that various government and private institutions are utilizing our services.

3. Objective of the EOI:

The purpose of this exercise is to seek proposals for shortlisting of the vendors who are capable of implementation of Artificial Intelligence in Radiology reporting to augment and enhance the speed, efficiency and productivity of Radiologist in generating of diagnostic reports.

The primary driver behind the emergence of AI in medical imaging has been the desire for greater efficacy and efficiency in clinical care. Radiological imaging data continues to grow at a disproportionate rate when compared with the number of available trained readers, and the decline in imaging reimbursements has forced health-care providers to

compensate by increasing productivity. These factors have contributed to a dramatic increase in radiologists' workloads. Studies report that, in some cases, an average radiologist must interpret one image every 3–4 seconds in an 8-hour workday to meet workload demands. As radiology involves visual perception as well as decision making under uncertainty, errors are inevitable — especially under such constrained conditions.

A seamlessly integrated AI component within the imaging workflow would increase analysis accuracy, efficiency, reduce errors and avoid missed diagnosis, achieve objectives with minimal manual input by providing trained radiologists with pre-screened images and identified features. The technology of artificial intelligence and machine learning are fast emerging brands of science. Based on the proposals received, HLL will analyze the usefulness of various solutions proposed and shortlist the vendors.

4. Scope of cooperation:

HLL is seeking response from Original Technology Manufacturer of Radiology Artificial Intelligence through a License and Technology Collaboration Agreement. Prospective collaborator shall be responsible for transferring necessary know-how & know-why to enable HLL to use the support of Artificial Intelligence solution in Tele Radiology reporting service. HLL intends to cater to domestic market in India as well as overseas market. Interested manufacturers meeting the Pre-Qualification Requirements (PQRs) are invited to submit their offer in response to this EoI. Upon receipt of responses against this EoI, HLL will review the responses to ascertain suitability of the offer and shortlist prospective collaborator for further discussions. Detailed discussions on commercial and other terms and conditions to finalize the Technology Collaboration Agreement (TCA) shall be held with shortlisted prospective collaborator. The detailed terms and conditions for such a paid-up license agreement shall be mutually agreed upon.
